PROJECTS AND EXPERIENCE

Qos ranking prediction of search engines using cloud services

Details-The project mainly deals with ranking prediction of sear engines like ask yahoo bing and google by displaying the time in mili sec and no of results per page.Also it has a feedback analysys for the results a user can give their feedbacck.Project gives graphical representation in form of pie charts,line charts,bar graphs etc.USes Java Script and MySQL as the database

Coinbase uses Redis to enforce rate limits and guarantee correctness of Bitcoin transactions

Details-The project mainly deals with digital and online transactions for the company .Redis enforces rate limits here and the database used is NOSQL.The project provides a platform to look into the transactions and provide security and a guarantee of bitcoin transactions.

Spotify uses Cassandra to store user profile attributes and metadata about artists, songs, etc. for better personalization

Details-The Apache Cassandra database is the right choice when you need scalability and high availability without compromising performance.The project deals with storing user profiles attributes and metadata revolving around several domains that provide better personalization features

Shopping cart application using Angular Js

Details-It presents a list of the products available. Users can search for items using a filter, get detailed information about specific products by clicking their names, add products to the shopping cart, and see a quick summary of what is in their cart. Clicking the summary navigates to the cart. Users can edit the cart and checkout using **PayPal** or **Google Wallet**. Offering more payment options tends to increase sales, because some users may have accounts with one service or the other

Multi Page Responsive Website
Objective: Recreate a pixel perfect design, and solve responsive design problems.
It is a static, responsive, multi-page website. of buying design bundles which provide many choices in layouts while still being affordable.The multi page responsive website is a developed using Java And CSS and it aims at solving design problems in websites

Enterprise Development Project

The project aims to improve the operating environment for all enterprises, public or private. In addition, reduction of budgetary deficits and generation of a supply response from all enterprises are critical. The private enterprise (PE) sector must be reduced in size, its performance increased, and greater financial discipline should be maintained. The project will finance local and foreign exchange requirements through investment support, financial support, and technical assistance.
